

Operation Manual

Open - Close

Turn the cover to the lock/unlock position to open/close the Cleanoid.

Charging

Use the microUSB port to connect the Cleanoid with the power source to charge it. (Fully charge the Cleanoid before use.)

Charging display

The front-end LED lamp is in breathing state when the product is charging. The constant lamp indicates that the product has been fully charged.

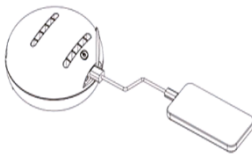

Handheld Mode

Close the Cleanoid with the cover to the lock position. Press the switch once to lighten the UV-C. Hold the silica gel belt and move the UV-C light close to the sterilizing objects. Press the switch again to turn off the UV-C lights.

Auto Mode

Press the switch for 3 seconds to start the Cleanoid and place it for automatic walking and disinfection. If the front-end LED lamp starts to blink quickly, the Cleanoid is at low power. Press the switch once to stop it and charge it.

Power Bank Mode

Connect the Cleanoid and your device which needs to be charged using the USB port.

Warning and Advice

- (1) Do not use as a toy for children or babies.
- (2) Do not direct the eyes of UV-C light.
- (3) This product should not be soaked in water and should not be exposed to the sun.
- (4) UV-C lighting is not harmful to the human body during normal use, but long-term exposure to the human body may adversely affect the skin.
- (5) It is recommended to place the Cleanoid on the bed sheets 30 minutes before going to bed as it takes approximately 30 minutes to clean it.
- (6) The mites on the screen of the mobile phone are four times as large as the mites on the sheets. It is the easiest item to breed mites. It is recommended to sterilize and remove mites frequently to avoid affecting the facial skin.
- (7) Children are less resistant than adults. Toys are a hotbed of mites. It is recommended to clean toys, especially plush toys, regularly.
- (8) In addition to bed sheets, door handles and toilet lids are particularly susceptible to aphids and bacteria.
- (9) Although there is a Cleanoid, it does not mean that the sheets do not need to be cleaned, Cleanoid is a sterilization and removing function, which can effectively inhibit the regeneration of bacterial microorganisms. It is recommended to clean the sheets and other items regularly. The freshly washed clothes are cleaned twice with Cleanoid. The cleaning effect of the best.
- (10) It is recommended to use manual mode for some infrared absorbing materials with unstable induction.
- (11) Please do not tear the screw sticker, otherwise quality and after-sales NOT guaranteed.
